Market Structures Explained

Market structures describe the organization and characteristics of different markets. Recognizing the differences among them helps in understanding how prices are determined and how resources are

allocated.

1. Perfect Competition

- Many buyers and sellers
- Homogeneous products
- Free entry and exit in the market
- Price takers (no control over market price)
- Examples: Agricultural markets, stock markets

2. Monopoly

- Single seller controls the entire market
- Unique product with no close substitutes
- High barriers to entry
- Price setter (can influence prices)
- Examples: Utility companies, patented pharmaceuticals

3. Oligopoly

- Few large firms dominate the market
- Products may be homogeneous or differentiated
- Significant barriers to entry
- Firms may collude or compete aggressively
- Examples: Airline industry, automobile manufacturers

4. Monopolistic Competition

- Many firms selling differentiated products
- Free entry and exit
- Some control over prices due to product differentiation
- Examples: Restaurants, clothing brands

Government Intervention and Market Failures

While markets tend to allocate resources efficiently under perfect competition, real-world markets often face failures that justify government intervention. Section 5 addresses how government

policies aim to correct these issues.

Market Failures

- Externalities (positive and negative)
- Public goods
- Market power (monopolies and oligopolies)
- Information asymmetry

Government Policies

- Regulation and antitrust laws
- Taxes and subsidies
- Provision of public goods
- Price controls (ceilings and floors)

Understanding when and how governments intervene helps in answering questions related to economic policy and its impacts.
