Sample MCQs in XII Chemistry with Explanations

Practicing actual questions enhances understanding. Below are some sample MCQs from various chapters with detailed explanations.

Question 1: Solid State

Which of the following packings has the maximum packing efficiency?

- Simple cubic
- Body-centered cubic
- Face-centered cubic
- Hexagonal close packing

Answer: C. Face-centered cubic

Explanation: The face-centered cubic (FCC) packing has a packing efficiency of approximately 74%, which is the maximum among the listed options. Hexagonal close packing (HCP) also has 74%, but since FCC is explicitly listed, it is the correct choice here.

Question 2: Solutions

A solution contains 0.5 mol of solute in 1 liter of solution. What is its molarity?

- 0.25 M
- 0.5 M
- 1 M
- 2 M

Answer: B. 0.5 M

Explanation: Molarity (M) = moles of solute / volume of solution in liters. Therefore, 0.5 mol / 1 L = 0.5 M.

Question 3: Electrochemistry

In a galvanic cell, the standard reduction potential of the cathode is more positive than that of the anode. Which statement is correct?

- The cell is non-spontaneous.
- The cell is spontaneous.
- The cell cannot operate.
- The cell requires external energy to operate.

Answer: B. The cell is spontaneous.

Explanation: A galvanic cell operates spontaneously when the reduction potential at the cathode is more positive than at the anode, leading to a positive cell potential.

Question 4: Organic Chemistry

Which of the following compounds is aromatic?

- Cyclobutadiene
- Benzenoid
- Cyclohexene
- Cyclopentadiene

Answer: B. Benzenoid

Explanation: Benzene (a benzenoid compound) has a conjugated π -electron system satisfying Hückel's rule ($4n + 2$ π electrons), making it aromatic. Cyclobutadiene and cyclopentadiene are antiaromatic or non-aromatic; cyclohexene is non-conjugated.
