Key Elements of BS EN ISO 9692

Classification of Weld Types

BS EN ISO 9692 classifies welds into various categories based on their geometry, purpose, and location within assemblies. The primary categories include:

- Groove Welds: Welds made in the groove between two members to be joined.
- Fillet Welds: Welds that join two surfaces at approximately right angles, forming a fillet.
- Spot and Seam Welds: Used primarily in sheet metal fabrication for joining overlapping parts.
- Edge Welds: Applied along the edges of materials to create a continuous or discontinuous weld.

Each weld type is further subdivided based on specific features, such as the weld's cross-sectional shape, the method of application, and the intended load-bearing capacity.

Welding Symbols and Their Usage

A core component of BS EN ISO 9692 is the standardized system of welding symbols used in technical drawings. These symbols communicate:

- The type of weld required.
- The size and length of welds.
- The weld's location and orientation.
- Additional instructions such as inspection or special conditions.

For example:

- A fillet weld symbol is a right-angled triangle placed on the reference line.
- A groove weld may be indicated with a specific symbol placed on a particular side of the reference line to denote its location.

Proper understanding and application of these symbols ensure that welds are fabricated and inspected in accordance with the specified requirements.

Designation of Welds

The standard prescribes a systematic method for designating welds, combining symbols, codes, and annotations to convey comprehensive information. Typical designations include:

- The type of weld (e.g., fillet, groove).
- The size or throat thickness.
- The length and pitch (spacing) for repetitive welds.
- Additional notes regarding inspection or special requirements.

This clear designation system aids in reducing errors and ensuring compliance throughout the manufacturing process.

Quality and Inspection Criteria

BS EN ISO 9692 emphasizes the importance of weld quality, providing guidance on:

- Visual inspection criteria for surface flaws, misalignments, and dimensions.
- Non-destructive testing methods such as ultrasonic testing, radiographic testing, and magnetic particle inspection.
