Sample Questions and Model Answers from the June 2014 Memorandum

Sample Question 1: Describe the process of river formation and erosion

Model Answer:

River formation begins when surface runoff from rainfall collects in small channels on the land surface. These channels gradually enlarge through continuous erosion and transportation of sediments, forming streams that merge to create rivers. Rivers erode their banks and beds through processes such as hydraulic action, abrasion, and attrition. Over time, these processes carve out various landforms like valleys, gorges, and floodplains.

Key points:

- Source of rivers and how they develop
- Types of erosion involved
- Landforms created by river erosion

Sample Question 2: Explain the impact of urbanization on the environment

Model Answer:

Urbanization significantly impacts the environment through increased pollution, habitat destruction,

and resource depletion. The expansion of cities leads to deforestation, which reduces biodiversity and disrupts ecosystems. Air and water pollution increase due to vehicles, industries, and improper waste disposal. Urban areas also contribute to the heat island effect, raising local temperatures. Additionally, urbanization strains infrastructure and water supply systems, leading to challenges in sustainable resource management.

Key points:

- Pollution and waste issues
- Loss of natural habitats
