Question What is the primary goal of health economics in the context of the Folland multiple choice exam? To analyze how scarce healthcare resources are allocated and to improve efficiency and equity in healthcare delivery. Which concept explains the trade-off between cost and

benefit in healthcare decision-making? Opportunity cost, which refers to the value of the next best alternative foregone when making a healthcare choice. In Folland's health economics, what does the term 'moral hazard' refer to? The tendency of insured individuals to consume more healthcare because they do not bear the full cost of their care. Which method is commonly used in health economics to evaluate the cost-effectiveness of medical interventions? Cost-Effectiveness Analysis (CEA), which compares the relative costs and outcomes of different interventions. What role does 'demand elasticity' play in healthcare economics, especially regarding pricing and access? Demand elasticity measures how sensitive the quantity of healthcare demanded is to changes in price, influencing pricing strategies and access policies. In the context of Folland's health economics, what is 'moral hazard' most associated with? Overutilization of healthcare services due to insurance coverage, leading to increased healthcare costs.
