Theoretical Frameworks in Health Psychology Brannon

Biopsychosocial Model

Central to Brannon's perspective is the biopsychosocial model, which posits that health and illness result from complex interactions among biological, psychological, and social factors. This holistic view challenges reductionist biomedical models and encourages comprehensive assessment and intervention strategies.

Components include:

- Biological: genetics, physiology, medical conditions
- Psychological: emotions, beliefs, behaviors
- Social: relationships, cultural influences, socioeconomic status

Brannon advocates for applying this model to tailor interventions that address multiple determinants of health.

Theories of Health Behavior Change

Brannon's work often incorporates well-established theories such as:

- Health Belief Model (HBM): Focuses on individuals' perceptions of susceptibility, severity, benefits, and barriers related to health behaviors.
- Theory of Planned Behavior (TPB): Emphasizes intentions influenced by attitudes, subjective norms, and perceived behavioral control.
- Transtheoretical Model (Stages of Change): Describes behavioral change as a process through stages: precontemplation, contemplation, preparation, action, maintenance.

Brannon's approach involves applying these theories to design effective interventions, enhance motivation, and sustain health-promoting behaviors.

Practical Applications of Health Psychology Brannon

Health Promotion and Disease Prevention

Brannon's emphasis on proactive health behaviors has informed numerous programs aimed at:

- Smoking cessation
- Weight management
- Physical activity promotion
