

Physics Formula List Class Xii Academic PDF

Physics Formula List Class XII: The Complete Guide

Physics formula list class XII is an essential resource for students preparing for board exams, competitive exams, and understanding core concepts in physics. Having a comprehensive list of formulas helps students to revise quickly, grasp the fundamentals, and solve problems efficiently. This article provides an extensive compilation of physics formulas categorized topic-wise, ensuring that students can find the information they need in one place, along with explanations and tips for mastering them.

Important Physics Formulas in Class XII

1. Kinematics

Kinematics deals with the motion of objects without considering the forces causing the motion. The formulas are fundamental for solving problems related to velocity, acceleration, and displacement.

- **Displacement with constant acceleration:**

$$s = ut + \frac{1}{2}at^2$$

- **Final velocity:**

$$v = u + at$$

- **Velocity squared:**

$$v^2 = u^2 + 2as$$

- **Average velocity (for uniformly accelerated motion):**

$$v_{avg} = \frac{u + v}{2}$$

2. Laws of Motion

Newton's laws form the foundation of classical mechanics. The formulas here are crucial for understanding forces and motion.

- **Force (Newton's Second Law):**

$$(F = m a)$$

- **Weight:**

$$(W = mg)$$

- **Impulse:**

$$(J = F \Delta t = \Delta p)$$

- **Momentum:**

$$(p = mv)$$

3. Work, Power, and Energy

This section includes formulas related to energy conservation, work done by forces, and power.

- **Work done:**

$$(W = F s \cos \theta)$$

- **Kinetic energy:**

$$(KE = \frac{1}{2} m v^2)$$

- **Potential energy (due to gravity):**

$$(PE = m g h)$$

- **Power:**

$$(P = \frac{W}{t})$$

4. Rotational Motion

Understanding rotational dynamics is vital for topics involving spinning objects and angular quantities.

- **Angular displacement:**

$$(\theta) \text{ (radians)}$$

- **Angular velocity:**

$$(\omega = \frac{\theta}{t})$$

- Angular acceleration:

$$\alpha = \frac{\omega - \omega_0}{t}$$

- Moment of inertia (for a point mass):

$$I = m r^2$$

- Torque:

$$\tau = I \alpha$$

5. Gravitation

Gravitational formulas are key to understanding planetary motion, satellite dynamics, and gravitational fields.

- Universal law of gravitation:

$$F = G \frac{m_1 m_2}{r^2}$$

- Acceleration due to gravity:

$$g = G \frac{M}{r^2}$$

- Gravitational potential energy:

$$U = - G \frac{m_1 m_2}{r}$$

- Escape velocity:

$$v_e = \sqrt{\frac{2 G M}{r}}$$

6. Properties of Matter

This section covers formulas related to elasticity, stress, strain, and surface tension.

- Hooke's Law:

$$F = k x$$

- Stress:

$$\sigma = \frac{F}{A}$$

- Strain:

$$\left(\epsilon = \frac{\Delta l}{l} \right)$$

- **Young's modulus:**

$$\left(Y = \frac{\sigma}{\epsilon} \right)$$

- **Surface tension (force per unit length):**

$$\left(T = \frac{F}{l} \right)$$

7. Thermodynamics

Formulas here are crucial for understanding heat, work, and efficiency in thermodynamic processes.

- **First Law of Thermodynamics:**

$$\left(\Delta U = Q - W \right)$$

- **Specific heat capacities (constant volume and pressure):**

$$\left(C_v, C_p \right)$$

- **Work done in expansion/compression:**

$$\left(W = P \Delta V \right)$$

- **Carnot efficiency:**

$$\left(\eta = 1 - \frac{T_C}{T_H} \right)$$

8. Electrostatics

Electrostatic formulas help in understanding electric charges, fields, and potentials.

- **Electric force (Coulomb's Law):**

$$\left(F = k_e \frac{q_1 q_2}{r^2} \right)$$

- **Electric field:**

$$\left(E = \frac{F}{q} \right) \text{ or for point charges:}$$

$$\left(E = k_e \frac{q}{r^2} \right)$$

- **Electric potential:**

$$\left(V = \frac{U}{q} \right)$$

- **Potential difference:**

$$\left(V = E \times d \right)$$

9. Current Electricity

Formulas related to electric current, resistance, and circuits are fundamental in electronics.

- **Ohm's Law:**

$$\left(V = IR \right)$$

- **Power dissipated in a resistor:**

$$\left(P = VI = I^2 R = \frac{V^2}{R} \right)$$

- **Series resistance:**

$$\left(R_{\text{total}} = R_1 + R_2 + \dots + R_n \right)$$

- **Parallel resistance:**

$$\left(\frac{1}{R_{\text{total}}} = \frac{1}{R_1} + \frac{1}{R_2} + \dots + \frac{1}{R_n} \right)$$

10. Magnetism and Electromagnetism

This section covers formulas related to magnetic fields, forces, and electromagnetic induction.

- **Magnetic force on a moving charge:**

$$\left(F = q v B \sin \theta \right)$$

- **Magnetic field due to a long straight current-carrying wire:**

$$\left(B = \frac{\mu_0 I}{2 \pi r} \right)$$

- **Electromagnetic induction (Faraday's Law):**

$$\left(\mathcal{E} = - \frac{d \Phi_B}{dt} \right)$$

- **Self-induction (inductive reactance):**

$$\left(V \right)$$

Physics Formula List Class XII: A Comprehensive Guide for Students and Enthusiasts

Understanding the fundamental principles of physics hinges greatly on memorizing and mastering key formulas that describe the natural world. For Class XII students, who are preparing for board exams and beyond, having a well-organized, detailed compilation of physics formulas is essential. This article aims to serve as a thorough reference, breaking down complex concepts into digestible, analytical explanations, and emphasizing the significance of each formula within its respective domain.

Introduction to Physics Formulas for Class XII

Physics, often regarded as the backbone of understanding the universe, is a subject rooted in mathematical formulations. These formulas encapsulate the laws governing motion, energy, electricity, magnetism, optics, and modern physics. Mastery over these formulas not only aids in solving numerical problems efficiently but also deepens conceptual understanding.

Class XII physics syllabus encompasses a broad spectrum of topics, each with its own set of fundamental formulas. This guide aims to systematically explore these formulas, their derivations, applications, and the underlying principles they represent.

Kinematics

Kinematics deals with the motion of objects without considering the causes of motion. It introduces equations that describe displacement, velocity, acceleration, and time.

1. Equations of Motion

These equations are valid for uniformly accelerated motion in a straight line:

- First Equation:

$$v = u + at$$

$$v = u + at$$

$$v^2 = u^2 + 2as$$

Where:

- v = final velocity
- u = initial velocity
- a = acceleration
- t = time elapsed

- Second Equation:

[

$$s = ut + \frac{1}{2} a t^2$$

]

Where:

- s = displacement

- Third Equation:

[

$$v^2 = u^2 + 2as$$

]

These equations are foundational in analyzing linear motion, allowing students to determine unknown quantities when others are known. They are derived from calculus-based principles but are often used in their algebraic forms.

Newton's Laws of Motion

Newton's laws form the core of classical mechanics, describing the relationship between forces and motion.

1. First Law (Law of Inertia)

An object remains at rest or moves uniformly in a straight line unless acted upon by an external force. This law introduces the concept of inertia and sets the stage for understanding force.

2. Second Law

[

$$F = ma$$

]

Where:

- (F) = net force applied on an object
- (m) = mass of the object
- (a) = acceleration produced

This formula quantifies how forces influence motion. It helps in calculating the acceleration resulting from a known force or vice versa.

3. Third Law

For every action, there is an equal and opposite reaction.

Work, Energy, and Power

These concepts describe how energy is transferred and transformed in physical systems.

1. Work Done

[

$$W = F s \cos \theta$$

]

Where:

- (W) = work done
- (F) = magnitude of force
- (s) = displacement
- (θ) = angle between force and displacement

The work-energy principle states that the work done on an object results in a change in its energy.

2. Kinetic Energy (KE)

\[

$$KE = \frac{1}{2} mv^2$$

\]

This formula quantifies the energy possessed by a moving body.

3. Potential Energy (PE)

\[

$$PE = mgh$$

\]

Where:

- m = mass
- g = acceleration due to gravity
- h = height above a reference point

4. Power

\[

$$P = \frac{W}{t}$$

\]

Expresses the rate at which work is done or energy is transferred.

Gravitation

The study of forces of attraction between masses is central to understanding celestial mechanics and planetary motion.

1. Universal Law of Gravitation

\[

$$F = G \frac{m_1 m_2}{r^2}$$

\]

Where:

- (F) = gravitational force between two masses
- (G) = gravitational constant $(6.674 \times 10^{-11} \text{ Nm}^2/\text{kg}^2)$
- (m_1, m_2) = masses
- (r) = distance between centers of the two masses

This law explains gravity's inverse-square nature and underpins planetary orbits and satellite motion.

2. Acceleration Due to Gravity

\[

$$g = \frac{GM}{r^2}$$

\]

Where:

- (M) = mass of the celestial body
- (r) = radius from the center of the body to the point of measurement

Properties of Matter and Fluids

This section deals with the behavior of solids, liquids, and gases under various forces.

1. Pressure and Buoyancy

- Pressure at a Depth (h) :

$$\backslash[$$

$$P = P_0 + \rho g h$$

$$\backslash]$$

Where:

- (P_0) = atmospheric pressure
- (ρ) = density of the fluid

- Archimedes' Principle:

$$\backslash[$$

$$\text{Buoyant Force} \ (F_b) = \rho_{\text{fluid}} \times g \times V_{\text{displaced}}$$

$$\backslash]$$

This explains why objects float or sink.

2. Bernoulli's Theorem

$$\backslash[$$

$$P + \frac{1}{2} \rho v^2 + \rho g h = \text{constant}$$

$$\backslash]$$

Describes the behavior of flowing fluids, illustrating the relationship between pressure, velocity, and height.

Thermodynamics

The study of heat, work, and energy transfer.

1. Specific Heat Capacity

$$\backslash[$$

$$Q = mc\Delta T$$

]

Where:

- Q = heat energy supplied
- m = mass
- c = specific heat capacity
- ΔT = change in temperature

2. Gas Laws

- Boyle's Law:

[

$$PV = \text{constant}$$

]

- Charles's Law:

[

$$\frac{V}{T} = \text{constant}$$

]

- Ideal Gas Law:

[

$$PV = nRT$$

]

Where:

- (P) = pressure
- (V) = volume
- (n) = number of moles
- (R) = universal gas constant
- (T) = temperature in Kelvin

Oscillations and Waves

Describes periodic motions and wave phenomena.

1. Simple Harmonic Motion (SHM)

- Displacement:

[

$$x(t) = A \sin (\omega t + \phi)$$

]

- Velocity:

[

$$v(t) = A \omega \cos (\omega t + \phi)$$

]

- Acceleration:

[

$$a(t) = -A \omega^2 \sin (\omega t + \phi) = -\omega^2 x(t)$$

]

Where:

- (A) = amplitude
- (ω) = angular frequency
- (ϕ) = phase constant

- Period and Frequency:

[

$$T = \frac{2\pi}{\omega}$$

]

[

$$f = \frac{1}{T}$$

]

- Restoring Force:

[

$$F = -kx$$

]

where (k) is the force constant.

2. Wave Speed

[

$$v = \lambda f$$

]

Where:

- λ = wavelength
- f = frequency

Electromagnetism

Covers electric charges, potentials, currents, and magnetic effects.

1. Coulomb's Law

[

$$F = k_e \frac{q_1 q_2}{r^2}$$

]

Where:

- k_e = Coulomb's constant ($9 \times 10^9, \text{Nm}^2/\text{C}^2$)
- q_1, q_2 = point charges

2. Ohm's Law

[

$$V = IR$$

]

Where:

- V = voltage
- I = current
- R = resistance

3. Magnetic Force on a Moving Charge

$$\vec{F} = q \vec{v} \times \vec{B} \sin \theta$$

$$F = q v B \sin \theta$$

$$\vec{v}$$

Where:

- q = charge

Question What are the main formulas related to kinematics in Class XII physics? The main kinematic formulas include: $v = u + at$, $s = ut + \frac{1}{2} at^2$, $v^2 = u^2 + 2as$, where u = initial velocity, v = final velocity, a = acceleration, s = displacement, and t = time. What is the formula for calculating potential energy in physics? Potential energy (PE) is given by $PE = mgh$, where m is mass, g is acceleration due to gravity, and h is height above the reference point. How is the formula for Ohm's Law expressed in Class XII physics? Ohm's Law states that $V = IR$, where V is voltage, I is current, and R is resistance. What is the formula for calculating work done in physics? Work done (W) is calculated as $W = Fd \cos \theta$, where F is the applied force, d is the displacement, and θ is the angle between force and displacement. Can you list the formulas related to Newton's Laws of Motion? Newton's Second Law is $F = ma$, where F is force, m is mass, and a is acceleration. Also, the law implies that the force acting on an object is equal to the rate of change of its momentum.

list verbs english

list verbs english: An Essential Guide to Understanding and Using List Verbs in English

Understanding the intricacies of English verbs is fundamental to mastering the language. Among these, list verbs play a vital role in organizing, sequencing, and connecting ideas within sentences. Whether you're a student improving your writing skills, a professional enhancing your communication, or a language enthusiast aiming for fluency, knowing how to effectively use list verbs in English can significantly elevate your language proficiency. This comprehensive guide explores what list verbs are, their types, how to use them correctly, and practical examples to help

you incorporate them seamlessly into your writing and speech.

What Are List Verbs in English?

List verbs are a category of verbs used to indicate the sequential order or connection between items, actions, or ideas within a sentence or a list. They often serve as connectors, helping to organize information in a clear and logical manner. List verbs are crucial in both written and spoken English because they facilitate clarity and coherence.

Key functions of list verbs include:

- Indicating sequence or order
- Connecting related ideas or actions
- Signaling addition or continuation
- Showing cause and effect

Common Types of List Verbs in English

Understanding the different types of list verbs is essential for effective communication. Here are the most common categories:

1. Sequential List Verbs

These verbs indicate the order of actions or items, showing progression from one point to another.

Examples:

- First
- Next
- Then
- After
- Subsequently
- Finally

2. Connecting List Verbs

These verbs or phrases connect related ideas, often used to add new points or clarify relationships.

Examples:

- And
- Also
- Moreover
- Additionally
- As well as
- Not only...but also

3. Cause and Effect Verbs

These verbs show a causal relationship between ideas or actions.

Examples:

- Because
- Therefore
- Consequently
- Thus
- As a result

4. Contrastive List Verbs

They highlight differences or contradictions between items or ideas.

Examples:

- However
- But
- On the other hand
- Conversely
- Yet

How to Use List Verbs Effectively in English

Using list verbs correctly enhances clarity and coherence in your writing. Here are practical tips for their effective application:

1. Choose the Appropriate List Verb Based on Context

Identify whether you're indicating sequence, addition, causality, or contrast, and select the suitable

list verb accordingly.

2. Use Consistent Punctuation

When listing items, punctuation plays a key role:

- Use commas for simple lists (e.g., apples, oranges, bananas).
- Use semicolons for complex lists where items contain commas.
- When starting a list with a list verb, consider using colons.

3. Place List Verbs Correctly in Sentences

- For sequential words, they often come at the beginning of the sentence or clause.
- Connecting words like "and," "but," or "moreover" are usually placed between items or clauses.

4. Maintain Parallel Structure

Ensure that items in a list or connected clauses follow the same grammatical pattern for clarity and professionalism.

Examples of List Verbs in Sentences

To illustrate the effective use of list verbs, here are some example sentences categorized by their function:

Sequential List Verbs

- First, I reviewed the project outline.
- Next, I gathered all the necessary materials.
- Then, I began assembling the components.
- After completing the assembly, I tested the device.
- Finally, I submitted the report to my supervisor.

Connecting List Verbs

- I enjoy reading books, watching movies, and listening to music.
- The conference covered topics such as renewable energy, sustainable development, and

climate change.

- She is not only skilled in marketing but also experienced in sales.

Cause and Effect List Verbs

- The roads were icy; therefore, the school was closed.
- He missed the bus because he woke up late.
- The product failed due to poor quality; as a result, sales declined.

Contrastive List Verbs

- The weather was cold; however, we still went hiking.
- She prefers tea, but he likes coffee.
- The first option was expensive; on the other hand, the second was more affordable.

Common List Verbs and Phrases in English

Below is a list of commonly used list verbs and phrases categorized by their function:

Sequential List Verbs and Phrases

- First, second, third
- To begin with
- Subsequently
- Thereafter
- In the meantime

Adding and Connecting Ideas

- Moreover
- Furthermore
- Besides
- Plus
- Not to mention

Indicating Cause and Effect

- Because
- Due to
- As a result
- Hence
- Accordingly

Expressing Contrast or Opposition

- However
- Yet
- Conversely
- On the contrary
- Nonetheless

Tips for Mastering List Verbs in English

Achieving mastery over the use of list verbs enhances your writing clarity and fluency. Here are some tips:

- Read extensively: Pay attention to how professional writers and speakers use list verbs.
- Practice writing lists: Create lists in your writing, focusing on correct punctuation and parallel structure.
- Use a variety of list verbs: Avoid repetition by diversifying your list verbs.
- Edit and revise: Review your writing to ensure list verbs are used appropriately and effectively.
- Learn idiomatic expressions: Many list phrases are idiomatic; familiarize yourself with common expressions to sound more natural.

Conclusion

Mastering the use of list verbs in English is essential for clear, organized, and effective communication. Whether you're listing items, sequencing actions, connecting ideas, or indicating relationships, the right list verbs can make your writing more coherent and engaging. By understanding the different types of list verbs—sequential, connecting, cause and effect, and contrastive—you can enhance your language skills significantly. Incorporate these verbs thoughtfully into your sentences, maintain grammatical consistency, and practice regularly to become proficient in their use. Remember, the key to effective communication lies in clarity, and list verbs are a powerful tool to achieve it in your English language endeavors.

List Verbs in English: An In-Depth Exploration of Their Role, Types, and Usage

Language is a complex and dynamic system, and at its core are the words that allow us to communicate ideas, actions, and states of being. Among these, verbs stand out as the essential drivers of sentence meaning, providing the action or link that binds other components together. In English, a particularly intriguing subset of verbs is the list verbs, which serve specific functions in sequencing, enumerating, or indicating multiple items or actions. This article offers a comprehensive examination of list verbs in English, exploring their definitions, types, grammatical roles, and practical applications.

Understanding List Verbs in English

List verbs are a category of verbs used primarily to introduce, connect, or sequence items, actions, or ideas within a sentence. They often appear in contexts where a speaker or writer is enumerating elements, either explicitly or implicitly, to clarify, emphasize, or organize information.

Definition:

A list verb is a verb that functions to indicate the presence of multiple elements, often coordinating or linking them within a sentence. They can serve as connectors or markers that demonstrate the relationship between items in a list.

Common Characteristics of List Verbs:

- They often precede or follow a series of items.
- They can be used with conjunctions such as and, or, or but to link items.
- They frequently appear in formal or structured contexts like reports, instructions, or academic writing.
- They may also indicate the act of listing, enumerating, or ordering.

Common List Verbs in English

English features a variety of verbs that can serve as list verbs, either directly or through their grammatical function. Some verbs explicitly denote listing or enumeration, while others perform this role through their syntactic placement.

Explicit List Verbs

These verbs directly imply the act of listing or enumerating:

- To enumerate: To mention separately, one by one.

- To itemize: To list as individual items.
- To catalog: To systematically list or classify.
- To list: To enumerate items in sequence.
- To detail: To describe or list comprehensively.

Commonly Used List Verbs in Practice

Many English verbs serve as list verbs depending on context and usage. Here are some of the most frequently encountered:

| Verb | Function/Usage |

|-----|-----|

| Include | To contain as part of a whole or list |

| Consist of | To be composed of or made up of |

| Comprise | To include or contain; often used as a synonym for "consist of" |

| Enumerate | To mention separately, one by one |

| List | To record or mention items in sequence |

| Mention | To refer to or bring up items in a discussion or list |

| Name | To specify or identify items individually |

| Outline | To give a summary or list the main points |

| Specify | To state explicitly, often in a list form |

| Detail | To describe thoroughly, often by listing components |

| Present | To show or introduce items or ideas systematically |

Less Formal or Context-Dependent List Verbs

- Point out: To highlight items or facts.
- Highlight: To emphasize important items.

- Identify: To establish or recognize items.
- Itemize: To break down into individual items.
- Enumerate: To count or list methodically.

Grammatical Roles and Construction of List Verbs

List verbs can appear in various grammatical constructions, often depending on whether they are used transitively or in phrasal forms.

Transitive and Intransitive Uses

- Transitive list verbs: Require an object ? the list items or the content being enumerated.
- Example: "The report includes data from multiple sources."
- Intransitive list verbs: May stand alone when used as part of a broader context or phrase.
- Example: "The items list in the catalog are numerous."

Use with Prepositions and Conjunctions

List verbs often function with prepositions such as of, in, or to, and are frequently paired with coordinating conjunctions:

- "The package contains three items."
- "The guide enumerates the steps in detail."
- "The menu lists options and prices."

Parallelism and Clarity in Lists

When constructing sentences with multiple list verbs or enumerations, maintaining grammatical parallelism enhances clarity:

- Correct: "The report includes data, analyzes trends, and concludes findings."
- Incorrect: "The report includes data, analyzing trends, and conclude findings."

Functions and Contexts for List Verbs

List verbs serve various functions across different contexts, including formal writing, instructions, data presentation, and everyday speech.

Formal and Academic Writing

In academic or technical documents, list verbs help clarify complex information:

- "The study comprises three phases: data collection, analysis, and reporting."
- "The results enumerate several key factors influencing the outcome."

Business and Professional Communication

In reports, proposals, and business communication, list verbs organize information:

- "The proposal includes budget estimates, timelines, and resource allocations."
- "The contract lists obligations, deliverables, and penalties."

Instructional and Procedural Contexts

Procedures and instructions often rely on list verbs:

- "First, identify the necessary tools. Then, assemble the equipment."
- "The manual details the steps involved in calibration."

Everyday and Informal Usage

In casual speech, list verbs are used to mention or highlight multiple items:

- "The menu lists appetizers, main courses, and desserts."
- "She mentioned her plans, her goals, and her concerns."

Nuances and Common Pitfalls in Using List Verbs

While list verbs are integral to effective communication, their misuse can lead to ambiguity or grammatical errors.

Overuse or Redundancy

Repeatedly using similar list verbs can make writing monotonous. Varying verbs like include, list, enumerate, and mention can enrich the text.

Ambiguity in Scope

Some verbs, like mention, imply a less formal or comprehensive list, while others like comprise or include suggest completeness. Clarifying intent is essential.

Incorrect Constructions

- Using comprise incorrectly: "The team comprises of five members." (Correct: "The team comprises five members.")
- Mixing tenses improperly: "The report lists the data and was detailing the analysis." (Maintain consistent tense.)

Practical Tips for Using List Verbs Effectively

- Choose the right verb based on the formality and context of your writing.
- Maintain parallel structure when listing multiple items or actions.
- Use appropriate prepositions to clarify the scope of listing.
- Vary your vocabulary to avoid repetition.
- Be clear about whether your list is exhaustive or illustrative.

Conclusion

List verbs in English are vital tools for organizing, enumerating, and emphasizing information across diverse contexts. They facilitate clarity, structure, and precision in communication, whether in formal reports, instructional manuals, or everyday conversations. Understanding their nuances, grammatical roles, and best practices enhances one's ability to craft effective, coherent, and professional discourse. As language continues to evolve, so too will the ways we employ list verbs, but their core function remains central to clear and organized expression.

In mastering list verbs, writers and speakers can better navigate the complexities of English syntax, ensuring their messages are both precise and impactful.

Question What are some common list verbs used in English? Common list verbs in English include 'add', 'include', 'comprise', 'consist of', 'contain', 'enumerate', and 'feature'. How do you correctly use list verbs in a sentence? List verbs are typically used to introduce or connect items in a list, often followed by the items themselves. For example, 'The menu includes salads, sandwiches, and drinks.' What is the difference between 'include' and 'consist of' as list verbs? 'Include' suggests that the items are part of a larger set, while 'consist of' emphasizes the composition of the entire set. For example, 'The team includes five members' versus 'The team

consists of five members.' Can 'list' itself be used as a verb in English? Yes, 'list' is a verb meaning to make a list of items. For example, 'Please list all the ingredients required for the recipe.' What are some tips for using list verbs effectively in writing? Use clear and precise list verbs to accurately describe the relationship between items, ensure proper punctuation with commas or semicolons, and maintain parallel structure for readability. Are there any grammatical rules for using list verbs in complex sentences? Yes, when using list verbs in complex sentences, ensure subject-verb agreement is correct and that the list items are properly coordinated with conjunctions like 'and' or 'or' for clarity. How can I expand my vocabulary of list verbs in English? You can expand your list verbs by reading extensively, noting different ways authors introduce or enumerate items, and practicing using verbs like 'highlight', 'outline', 'feature', 'detail', and 'enumerate' in your writing.
