Fine-tuning ensures the luminaires deliver the required light levels without causing glare or light pollution.

Lighting Calculation and Analysis

Running the Lighting Simulation

Once luminaires are placed and configured:

- Click on the ?Calculate? button to run the simulation.
- Dialux will generate a lighting plan showing illuminance levels across the street.
- Review the 3D visualization to assess the uniformity and coverage.

Ensure the simulation parameters match real-world conditions for accurate results.

Evaluating Illuminance Levels

Use the analysis tools to verify compliance:

- Check the average and minimum illuminance values.
- Assess uniformity ratios (e.g., $\text{uniformity} = \text{minimum illuminance} / \text{average illuminance}$).
- Identify any areas with insufficient or excessive lighting.

Adjust luminaire placement or settings accordingly to meet standards.

Addressing Light Pollution and Glare

Properly designed streetlighting minimizes nuisance:

- Use shielding and proper beam angles to direct light downward.
- Analyze the light spill into adjacent areas using Dialux's light pollution tools.

- Adjust luminaire tilt and aim to reduce glare and skyglow.
