Sample Questions and Answers from June 2014 Memorandum

Practicing past exam questions is vital. Here are some typical questions and their succinct answers:

1. Describe the process of protein synthesis.

- Protein synthesis involves two main stages: transcription and translation. During transcription, a segment of DNA is used as a template to form mRNA in the nucleus. The mRNA then moves to the cytoplasm, where ribosomes facilitate translation by reading the mRNA sequence and assembling amino acids into a polypeptide chain, forming a protein.

2. Explain the importance of the water cycle in an ecosystem.

- The water cycle maintains water availability, supports plant growth, and regulates temperature. It involves processes like evaporation, condensation, precipitation, and runoff, ensuring the continuous movement and distribution of water essential for all living organisms.

3. Differentiate between mitosis and meiosis.

- Mitosis results in two genetically identical diploid cells, mainly for growth and repair. Meiosis produces four haploid cells with genetic variation, essential for sexual reproduction.

Additional Resources for Grade 11 Life Science Students

Beyond memorization, understanding concepts is crucial. Students should utilize various resources to deepen their knowledge:
