Core Topics Covered in AQA Physics: Summary Questions and Answers

This section breaks down the essential physics topics, providing example questions and succinct answers that students can use for revision.

1. Energy and Motion

Q1: What is kinetic energy, and how is it calculated?

A: Kinetic energy (KE) is the energy an object possesses due to its motion. It is calculated using the formula:

$$- KE = \frac{1}{2} m v^2$$

where m is the mass in kilograms and v is the velocity in meters per second.

Q2: Describe the principle of conservation of energy.

A: The principle of conservation of energy states that energy cannot be created or destroyed; it can only be transferred from one form to another. For example, in a falling object, potential energy converts to kinetic energy.

2. Forces and Motion**Q3: What is Newton's second law of motion?**

A: Newton's second law states that force equals mass times acceleration ($F = m a$). This means that the force acting on an object is proportional to its mass and the acceleration it experiences.

Q4: How does friction affect moving objects?

A: Friction opposes motion between surfaces in contact. It can slow down or stop moving objects and converts kinetic energy into heat. Friction is a force that acts parallel to the surfaces in contact.

3. Electricity**Q5: What is Ohm's Law?**

A: Ohm's Law states that the current flowing through a resistor is directly proportional to the voltage across it, provided temperature remains constant. The formula is:

$$- V = I R$$

where V is voltage, I is current, and R is resistance.

Q6: How do series and parallel circuits differ?

A: In a series circuit, components are connected end-to-end, sharing the same current but dividing the voltage. In a parallel circuit, components are connected across the same two points, sharing the same voltage but dividing the current.

4. Waves and the Electromagnetic Spectrum

Q7: What are the properties of transverse waves?

A: Transverse waves have oscillations perpendicular to the direction of energy transfer. Examples include light and water waves. They exhibit properties such as wavelength, frequency, and amplitude.

Q8: What is refraction?

A: Refraction is the bending of light as it passes from one medium to another due to a change in speed. It is governed by Snell's Law.

5. Matter and Atomic Structure

Q9: Describe the structure of an atom.

A: An atom consists of a nucleus made of protons and neutrons, surrounded by electrons orbiting in shells. Protons are positively charged, neutrons are neutral, and electrons are negatively charged.

Q10: What is radioactive decay?

A: Radioactive decay is the process by which unstable nuclei emit radiation (alpha, beta, or gamma particles) to become more stable. It is a random process with a characteristic half-life.

Sample AQA Physics Summary Questions and Answers for Practice

Below are some typical questions students might encounter, along with their concise answers to facilitate effective revision.

Question 1: Calculate the kinetic energy of a 0.5 kg ball moving at 4 m/s.

Answer: $KE = \frac{1}{2} m v^2 = \frac{1}{2} \times 0.5 \times 4^2 = 0.25 \times 16 = 4 \text{ Joules.}$

Question 2: Explain how increasing resistance affects current in a circuit at constant voltage.

Answer: Increasing resistance decreases the current according to Ohm's Law ($I = V/R$). As R increases, I decreases.

Question 3: Describe the process of conduction in metals.

Answer: Conduction in metals occurs when free electrons in the metal's lattice vibrate and transfer energy, allowing electrical current to flow easily through the material.

Question 4: How does the wavelength of a wave affect its energy?

Answer: Generally, shorter wavelengths have higher energy, while longer wavelengths have lower energy. This is especially true in the electromagnetic spectrum.

Question 5: What safety precautions should be taken when working with radioactive materials?

Answer: Use shielding (like lead or concrete), minimize exposure time, maintain distance, and wear protective clothing and dosimeters to monitor radiation exposure.

Effective Strategies for Using AQA Summary Questions and Answers in Physics Revision

1. Active Recall Practice

Try answering questions without looking at the answers first. This strengthens memory and understanding.
